DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, 4-9, 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vande Haar (US Patent No. 6,241,782) in view of Civanelli (US Patent No. 5,671,494).

Vande Haar ('782) discloses a washing machine having a stationary tub, a washing basket with an open rim and a plurality of holes in the wall, washing fluid, motor, controller and a boot seal (col. 3, ll. 30-65; Fig. 1, 3). Vande Haar ('782) also discloses various cycles and speeds of rotation (col. 2-3, 6). Vande Haar ('782) does not specifically disclose sensing an imbalance and decreasing the rotation based on the imbalance. Civanelli discloses multiple rotational speeds in the washing and rinsing process. Civanelli discloses a distribution speed or wash speed (first speed), orbital speed (second speed), first spinning speed (third speed) and second spinning speed (fourth speed) and draining of the liquid throughout the cycle. Civanelli also discloses sensing an imbalance by a change in the current of the motor (torque) or the motor speed and then reducing the rotational speed based on this imbalance (col. 1-5; Fig. 3). Civanelli further discloses gradually increasing the speed to various speeds including the orbital speed and checking for imbalances during this process. Although Civanelli does not specifically state the exact rotational speeds of each of

Art Unit: 1746

the levels of rotation, Civanelli does describe increasing the speed from 55 to 120 rpm (col. 3-4) and it would be obvious to one of ordinary skill in the art to divide the levels of speed in this range or approximate variations of this.

Claims 3 and 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vande Haar ('782) and Civanelli as applied to claims 1, 2 and 4-9 above, and further in view of Kawaguchi (US Patent No. 6,029,300).

Vande Haar ('782) and Civanelli disclose the method as shown above in the 103(a) rejection. They do not disclose stopping the rotation of the drum after detecting an imbalance. Kawaguchi discloses sensing an imbalance, stopping the rotation of the drum and then increasing the speed gradually (col. 2-3, see entire document as well). Vande Haar, Civanelli and Kawaguchi are analogous art because they are from the same field of endeavor, washing machines. At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify the method disclosed by Vande Haar and Civanelli with Kawaguchi for the benefit of avoiding damage to the machine.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art not referred to are Rettich (US 4,513,464), Anderson (US 4,631,771), Kawamoto (US 6,361,439), Myers (US 5,713,221), Ikeda (US 6,418,758), Conrath (US 6,530,100), Kakuda (US 6,615,619), Ciancimino (US 2001/0054204), Broker (US 2003/0056302) and Hird (US 2003/0145392), who teach imbalance mechanisms for washing machines.
